

# PAPER PRESENTATION

Paper Presentation is all about how you put your topic or present your topic in front of the public. They see the way you present it. They way you put your points.

Your way and the style of presenting the paper. The language you present the topic in.

Here first thing is that you have collect the imformation from the source you would like to. It can be the internet or some books on the topic.

You have to first **arrange** the information in the form as

1. define the topic
2. topic details
2. current affairs
3. advantages and the dis-adv.
4. cuases remedies
5. applications

Then you have to prepare the "**Abstract**".

Abstract- It is the details in short i.e not exceeding more than two pages. This you have to give to the place you want to present the topic. You have to write the Abstrct in the IEEE format if they ask you to do so.

**IEEE format** is like you have to have the specific size of the text  
eg.

for the heading the font is 14

for the sub heading the font is 12 and so on.

Then you have to make the hard and the soft copy.

One **hard copy** you have to submit to the place of the presentation.

and one with you.

Hard copy is the print pages of the detail of the topic(In this too you have to make the use of the IEEE format if specified. )

**Soft copy**

it is the power presentation(PP)

Do not write too much in the PP only the point. And explain them.

If the introduction page in made them there is no need to give the introduction again

and also make a slide of the source you have collected all the imformation from
