

# Selection of Branch in Terms of Salary and Job Security

# Latest Truth

- “NIKESH ARORA”, the guy in the latest News with the salary of **4 Crores per day**, is basically an Electrical Engineer, from IIT-BHU, Varanasi.
- He started his career from Telecommunication Industry and joined Google in 2004.
- Now he is in the Softbank Corporation- A Japanese Company at the salary of 120 crore per month.
- This shows an Electrical Engineer can rule over the Telecomm Engineers and the Computer Science Engineers.
- But no Software Engineer can rule over the Electrical Engineer in Havells, GE, ABB etc.

# Selection of branch in terms of salary and Job security

- May not come off with exact packages, but highest package is offered by Power Grid Corporation of India Limited, which is somewhere more than 13 Lakhs per annum (Electrical or Electronics graduates only). Some other State Companies like ONGC, HPCL, IOCL, BPCL etc also offers package of around 11-12 Lakhs. The least package you'll get, may be around 7.5-8 L.P.A. So in an average, your package will be around 10 L.P.A. (And don't forget the proposal of 7th Pay Commission. Which may increase the packages.)

➤ But the problem is that these PSU's hire mostly Electrical, Mechanical, Chemical and Civil graduates. Electronics or Instrumentation graduates have comparatively few posts. Computers or IT graduates have very few posts.

➤ Now, if you are a computer graduate from premier institute like an IIT or NIT or BITS or some other top colleges, you may get some better packages than these. For other branches, these PSU's offer the best package in India. You may get better package but in that case, your job location will be outside India. But then, there are many advantages of job in a PSU. Like,

Job security

Allowances & Benefits

Govt. Holidays

Flexible Timings

Pension Schemes

Medical facilities

And not to forget the 'respect' or 'reputation' in society.

So, the competition for these jobs is very high which makes them difficult to achieve. But nonetheless, in general opinion, these jobs are worth giving a shot, unless otherwise you want to go for higher studies or some other field like IAS or some other fields.

Kindly Note: The stats and statements made are based on general information. Exceptions may be there, But such exceptions happen rarely. So decision is up to you.

## What is an Electrical and Electronics Engineer?

- Did you know that electrical engineers are involved in creating cell phones, lasers, the Internet, PDAs, hybrid cars, video games, and satellite TV?
- Technologies developed by electrical engineers have enriched our lives in countless ways and revolutionized our daily environment.
- Electrical engineers gave the world modern virtual reality and spanned power distribution networks across vast rural areas in developing countries.

- Electrical engineers develop new pacemakers for ailing hearts, ultrasonic diagnostic devices for detection of tumors, and NMR machines. They provide secure and reliable communication to expeditions in remote and dangerous locations and to astronauts in space. They are responsible for numerous household and personal items, from your electronic wristwatch to your iPod.
- Electrical engineers work in multimedia, telecommunications, electric power, signal processing and control. They work with physicians on new diagnostic devices and with urban planners on new efficient vehicles. Their work makes our lives more interesting, effective and safe, and increases our productivity and standard of living.
