

DPhil (2012), University of Oxford

Studied human-centred computing through practice-based research in interaction design and user experience. My research examines transformations in people's behaviour, communication practices, and interaction when new technologies are introduced into a setting. I conduct empirical research using a variety of qualitative methods to identify requirements, improve usefulness and usability and identify implications for how new technologies transform social life.

Research Interests:

Human-Centred Robotics and Artificial Intelligence, Design Methodology, and Participatory Innovation of Emerging Technologies
