Summary Report

PLC Training is also designed to help delegates keep abreast of the latest PLC technologies and techniques available in this area, this tutorial offers an excellent opportunity for delegates to ask specific questions and exchange ideas relating to their own applications. The Programmable Logic Controller has evolved over the years and this course will provide the information required to make knowledgeable decisions about PLC applications in their individual manufacturing environments and allow for students to make well-informed decisions about existing control applications and to determine what is required for future applications. The **Department of Electronics and Instrumentation** organizes Online Summer School on Industrial Automation. This PLC training course will also allow students to determine if plant personnel are prepared to meet the new challenges of the ever-changing plant manufacturing environment or if personnel require additional training to meet these challenges.

COURSE OBJECTIVE

1. To understand the generic architecture and constituent components of a Programmable Logic Controller.
2. To develop a software program using modern engineering tools and technique for **PLC** and SCADA.
3. To apply knowledge gained about PLCs and SCADA systems to real-life industrial applications. PLC Training is designed to instruct control professionals on how to successfully integrate a PLC into actual day-to-day industrial electrical processes. It not only deals with the hardware and software, but all the surrounding systems that must be compatible to achieve a safe and reliable control system. This training is generic in nature and applies to all types and manufacturers.

COURSE OUTCOME

1. Students will be able to describe typical components of a Programmable Logic Controller.
2. Students will be able to explain the basic concepts of a Programmable Logic Controller.
3. Students will be able to state basic PLC terminology and their meanings.
4. Students will be able to explain and apply the concept of electrical ladder logic, its history, and its relationship to programmed PLC instruction.
5. Students will be able to explain the concept of basic digital electronics and data manipulation.
6. Students will be able to use timer, counter, and other intermediate programming functions.
7. Students will be able to design and program basic PLC circuits for entry-level PLC applications.
8. Students will be able to design and program a small, automated industrial production line.

Assistant Professor, MCA Department

About Winter School

The Department of Computer Applications organized a **Winter School on Advance C Programming** for the students from 01.01.20 to 10.01.20. This creates great demand for programmers on C Programming and excellent opportunities await those who are early into a growing market. The winter course was a hands-on course which was designed for providing essential skills and experiences to the students in developing applications using C Programming.

Inauguration

The event was started with the inaugural session by Dr. Ajay Kr. Shrivastava, HoD MCA, the faculty members of MCA, and students were also present. Dr. Ajay Kr. Shrivastava addressed the audience by introducing the event and appreciated the students for their participation in such type of activities and also highlighted the importance of this course.

Program Schedule

The program was held from 01.01.20 to 10.01.20. There were 2 sessions for theoretical concepts and 2 sessions for practical implementation per day. The track was divided into two halves, before lunch (9:30AM-12:30PM) and after lunch (1:30PM-4:00PM).

Trainers

The details of trainers and their affiliation are as follows:

Mr. R.N. Panda, Associate Professor, MCA Department
Dr. Akash Rajak, Associate Professor, MCA Department

Program Organizers

Mr.Naresh Chandra, Assistant Professor, MCA Department

Closing Ceremony

Winter School on Advance C Programming has been ended up with Dr. Ajay Kr. Shrivastava's (HOD, MCA) motivational speech followed by students open interaction, feedbacks and future scopes of this school. At last, successfully bind up with all faculties and students.

Conclusion

The event was very successful. In winter school 38 students have been registered. The participation was very good and participants were enthusiastic about the Winter School on Advance C Programming. The students of KIET were also get benefited by participating in the event and by getting the exposure of c programming. The Department is hoping to continue this series in future also. It has been observed that above winter school program was conducted in an extremely well-planned manner and students have immensely benefited from it.

2018-19

Department of Electronics & Communication Engineering

Summary Report

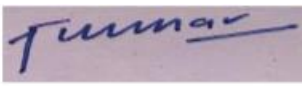

The Department of Electronics &Communication Engineering is organizing a very specialized and highly demanded summer training program. This summer school introduces students to state-of-art Signal & Systems for Signal Acquisition techniques with the concept of virtual instrumentation – the powerful combination of flexible software & modular hardware which helps to integrate theoretical concepts with real-world applications. One can acquire signal from any sensors like Thermocouples, RTDs, Accelerometer, Strain Gauges, etc; analyze signal using NI LABVIEW graphical programming software.

Course Objectives:

- Create awareness among the participants about signal & system using NI-LABVIEW
- To expose the utility, significance and importance of LABVIEW in simulating various signal operations.
- To give exposures of various applications of LABVIEW in different streams of Electronics and Electrical Engineering.
- Exposure to graphical programming environment and techniques for building applications in Fourier Transform, Z transform in LABVIEW.
- Create awareness among the participants about CLAD certification exam and targeting to qualify the CLAD exams of all participants.
- To verify the relevant knowledge, skills and abilities.
- The certification is anchored in three common areas where LabVIEW is used on the job:
    a. Automated test
    b. High-channel-count data acquisition
    c. Measurement and data logging for domain experts
- The CLAD represents a level of mastery of LabVIEW at which a person with minimal oversight can use LabVIEW to do the following:
    a. Acquire and interpret data
    b. Create small VIs
    c. Edit medium-sized VIs
    d. Contribute elements to large VIs and projects

Course Outcomes:

- All the students have successfully completed the training program on "Real time signal and system using NI-Labview software and hardware".

Hands on Training-Summer School: Summary Report with Outcome

All students of Second year and Third year Mechanical Engineering Department were offered a summer school (**Hands-on Training Programme)** for 4 weeks that is usually be scheduled just after University exams. This programme is very much beneficial for each student from practical learning point of view as participants perform operations, assemble and dissemble of machines by themselves. This programme was considered as the four weeks summer training and participants were awarded by certificates.

After completion of this training programme students will be able to:

1. Assemble and dissemble different parts of lathe machine to understand working of the components.
2. Perform different machining operation on Lathe Machine, Milling Machine, Drilling Machine, Grinding Machine, Shaping and Slotting Machine.
3. Understand types and specification of Machine Tools
4. Understand Different types of welding
5. Perform different welding operations.
6. Perform different types of testing on specimen.
7. Understand Basic concept of IC Engines.
8. Testing of different types of engines using alternative fuels engines.
9. Maintenance of different parts of engines.
10. Perform assembly of different parts of an IC Engine.
11. Understand technical drawing codes.
12. Draw Orthographic projection and Isometric views and Assembly drawing of mechanical components.

Summer School on Pneumatics: Summary Report with Outcome

INTRODUCTION

A pneumatic system is a collection of interconnected components using compressed air to do work for automated equipment. Examples can be found in industrial manufacturing, a home garage or a dentist office. This work is produced in the form of linear or rotary motion. The compressed air or pressurized gas is usually filtered and dried to protect the cylinders, actuators, tools and bladders performing the work. Some applications require a lubrication device that adds an oil mist to the closed pressurized system

COURSE CONTENTS

1. Properties of compressed air and its areas of application.
2. Basic pneumatics system and compressed air theory.
3. Compressed air production, purification and distribution.
4. Explanation of different air filtering, regulation and lubrication techniques.
5. Construction, principle of operation of Actuators and Directional Control valves.
6. Ancillary pneumatic equipment
7. Symbols-ISO
8. Reading/designing of control schematics
9. Practical exercises with troubleshooting.

Course Outcome

- Understand the production and purification of compressed air.
- Know about the construction and application of components in Pneumatic Control Systems.
- Identify the use of control schematics.
- Design and conduct the troubleshooting of Pneumatic circuits.

SUMMER INTERNSHIP REPORT

Topic: Planning, designing, analysis and estimation of a project

Summary: Summer school was organized in the Department of Civil Engineering under title "Planning, designing, analysis and estimation of a project". The school was organized during summer break from 22/06/2019 to 20/07/2019. Total 35 number of students attended the program. Preschool activities are conducted during 22/6/2019 to 30/6/2019 and after that classroom training was performed. All the live projects were done in association with Engineering Design and Research Pvt Ltd Noida. During training students learned and practiced on application of geological investigation, checked suitability of construction materials for sustainable development and also learned about the usage of modern techniques in planning, designing and analysis of structures along with the estimation of quantities. For the assessment viva was conducted after the completion of the school. Through this school students learned about the vast working area of Civil Engineering, application of softwares (Auto-cad, Stadd. Pro) for drafting, drawing and analysis of structures, estimate quantities of the project and to build practical understanding of subjects.

Department of Electronics and Instrumentation

KIET Group of Institutions, Ghaziabad

Summary Report

Academic research and development usually encompasses discovery, innovation, experimentation, and creation; however, in today's highly competitive and global economy, it also involves patents, licensing, technology transfer, and partnerships with industry. Virtual instrumentation is the combination of user-defined software and modular hardware that implements custom systems ("virtual instruments") with components for acquisition, processing/analysis and presentation. The **Department of Electronics and Instrumentation** organizes Summer School on "Basics of LabVIEW and Digital Electronics". National Instruments introduced the concept of virtual instrumentation more than 25 years ago and now offers an extensive platform of hardware and software for creating virtual instruments.

COURSE OBJECTIVE

1. Define dataflow and what is meant by 'Graphical Programming Language'.
2. Work with and manipulate SubVIs, along with their icons and connectors.
3. Demonstrate good LabVIEW project management techniques.
4. Describe what is meant by 'data acquisition'.
5. Input algebraic formulas via 'Formula Nodes' and 'Expression Nodes'.
6. Utilize Error Clusters and Error Handling functions.
7. Implement both single and multiple plot waveform graphs.
8. Troubleshoot broken VIs.
9. To understand the basic concepts of Virtual Instrumentation and application of LabVIEW for measurement and control applications.
10. Data Acquisition using Arduino.

COURSE OUTCOME

1. Understand the basics of virtual instrumentation concept and dataflow programming.
2. Understand various functions available in LabVIEW for engineering applications.
3. Understand various functions of Arduino for engineering applications.
4. Design projects using the functions available in LabVIEW.
5. Understand the interfacing of DAQ devices and customized user designed hardware with LabVIEW
6. Write the Certified LabVIEW Associate Developer (CLAD) exam, administered by National Instruments, for the certification and leading to placements in core companies

Department of Electronics & Communication Engineering

Summary Report

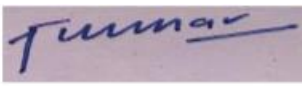

The Department of Electronics &Communication Engineering is organizing a very specialized and highly demanded summer training program. This summer school introduces students to state-of-art Signal & Systems for Signal Acquisition techniques with the concept of virtual instrumentation – the powerful combination of flexible software & modular hardware which helps to integrate theoretical concepts with real-world applications. One can acquire signal from any sensors like Thermocouples, RTDs, Accelerometer, Strain Gauges, etc; analyze signal using NI LABVIEW graphical programming software.

Course Objectives:

- Create awareness among the participants about signal & system using NI-LABVIEW
- To expose the utility, significance and importance of LABVIEW in simulating various signal operations.
- To give exposures of various applications of LABVIEW in different streams of Electronics and Electrical Engineering.
- Exposure to graphical programming environment and techniques for building applications in Fourier Transform, Z transform in LABVIEW.
- Create awareness among the participants about CLAD certification exam and targeting to qualify the CLAD exams of all participants.
- To verify the relevant knowledge, skills and abilities.
- The certification is anchored in three common areas where LabVIEW is used on the job:
    a. Automated test
    b. High-channel-count data acquisition
    c. Measurement and data logging for domain experts
- The CLAD represents a level of mastery of LabVIEW at which a person with minimal oversight can use LabVIEW to do the following:
    a. Acquire and interpret data
    b. Create small VIs
    c. Edit medium-sized VIs
    d. Contribute elements to large VIs and projects

Course Outcomes:

- All the students have successfully completed the training program on "Real time signal and system using NI-Labview software and hardware".

Summer School on Pneumatics: Summary Report with Outcome

INTRODUCTION

A pneumatic system is a collection of interconnected components using compressed air to do work for automated equipment. Examples can be found in industrial manufacturing, a home garage or a dentist office. This work is produced in the form of linear or rotary motion. The compressed air or pressurized gas is usually filtered and dried to protect the cylinders, actuators, tools and bladders performing the work. Some applications require a lubrication device that adds an oil mist to the closed pressurized system

COURSE CONTENTS

1. Properties of compressed air and its areas of application.
2. Basic pneumatics system and compressed air theory.
3. Compressed air production, purification and distribution.
4. Explanation of different air filtering, regulation and lubrication techniques.
5. Construction, principle of operation of Actuators and Directional Control valves.
6. Ancillary pneumatic equipment
7. Symbols-ISO
8. Reading/designing of control schematics
9. Practical exercises with troubleshooting.

Course Outcome

- Understand the production and purification of compressed air.
- Know about the construction and application of components in Pneumatic Control Systems.
- Identify the use of control schematics.
- Design and conduct the troubleshooting of Pneumatic circuits.

Outcome: By attending the above summer school students were able to understand the practical approach of Designing W.T.P. and S.T.P. . The summer school has taken the case study of Asalat Nagar Village, Muradnagar, Ghaziabad. The Study area is located in rural area with lot of problems of water logging and they are using Well water as main source of water at that time, with very few houses with Piped supply. Designing the treatment unit for such area is always a problem due to staggered houses. The students understand the practical problems which they

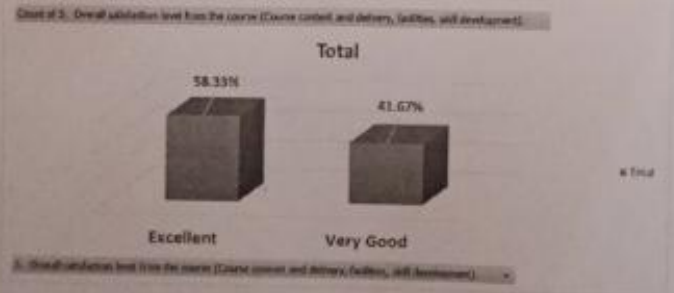

have to face while solving the problems of rural area.

Observation	Recommendation	Snaps
Carriageway broken and pavement surface in distress.	Carriage must be repaired and maintained as per IRC:82-2015 guidelines.	
Edges of carriageway not proper and may lead to accidents.	Reconstruction or maintenance of edges.	

Observation	Recommendation	Snaps
Shoulders are not of proper size and broken and inappropriate for vehicles.	Shoulders need to maintained and proper geometry should be maintained throughout as per IRC:86-1983	
Medians are not of appropriate standards and U-turn signs not installed.	Medians need to be widened and raised as per IRC:86-1983 and crash barriers need to be installed.	

Observation	Recommendation	Snaps
Uneven median height observed. Minimum criteria not maintained.	Medians need to be reconstructed uniformly over the whole stretch.	
Unexpected slopes observed near the shoulder.	Cross-slope needs to be provided properly to avoid accidents.	

Observation	Recommendation	Snaps
Tree found obstructing sight distance.	Part of the tree coming on the road should be cut to ensure minimum stopping sight distance.	
Highway kilometre stone sign found away from road.	Highway kilometre stone must be made close to road for driver’s convenience as per IRC:8-1980	

Observation	Recommendation	Snaps
Trees found on the shoulder , dangerous for vehicles.	Trees on the shoulders must be removed or else retro-reflectives must be pasted on them	
Traffic light found damaged.	Lights should be replaced or maintained for safety purpose.	

Observation	Recommendation	Snaps
Informatory sign damaged. Not as per IRC:67-2012	Need to be maintained or replaced	
No Informatory sign board installed for petrol pump. Access roads also accident prone.	Informatory signs are important and need to be installed.	

Observation	Recommendation	Snaps
Contraflow Vehicles movement observed which is highly dangerous on highways	Traffic law enforcement (traffic police) need to be strictly adhered to.	
Frequent Median opening affects traffic flow leading to queuing delays	Median openings must be curtailed and provided as per IRC:62-1976	

Observation	Recommendation	Snaps
Pedestrian interference(jay walking) is observed.	Pedestrian facilities needs to be provided as per IRC:103-2012, also pedestrian refuge is needed.	
Zebra crossing faded.	Need to be re drawn as soon as possible.	

Observation	Recommendation	Snaps
Electric poles observed very close to road.	Poles must be shifted away from the road.	
Advertisement boards observed close to the road.	Advertisement boards must be shifted away for safety and maintained as per IRC:46	

Observation	Recommendation	Snaps
Temporary shops observed on right of way (ROW)	Encroachments Need to be removed as soon as possible.	
Cattle related activities found near the road.	People must be stopped to use shoulder area and such activities need to be stopped.	

Observation	Recommendation	Snaps
Traffic light near the college not working as well as no informatory sign.	Informatory sign must be installed and traffic light must be maintained.	
Advertisement board poles found near the road , very dangerous during night.	Poles need to be removed immediately.	

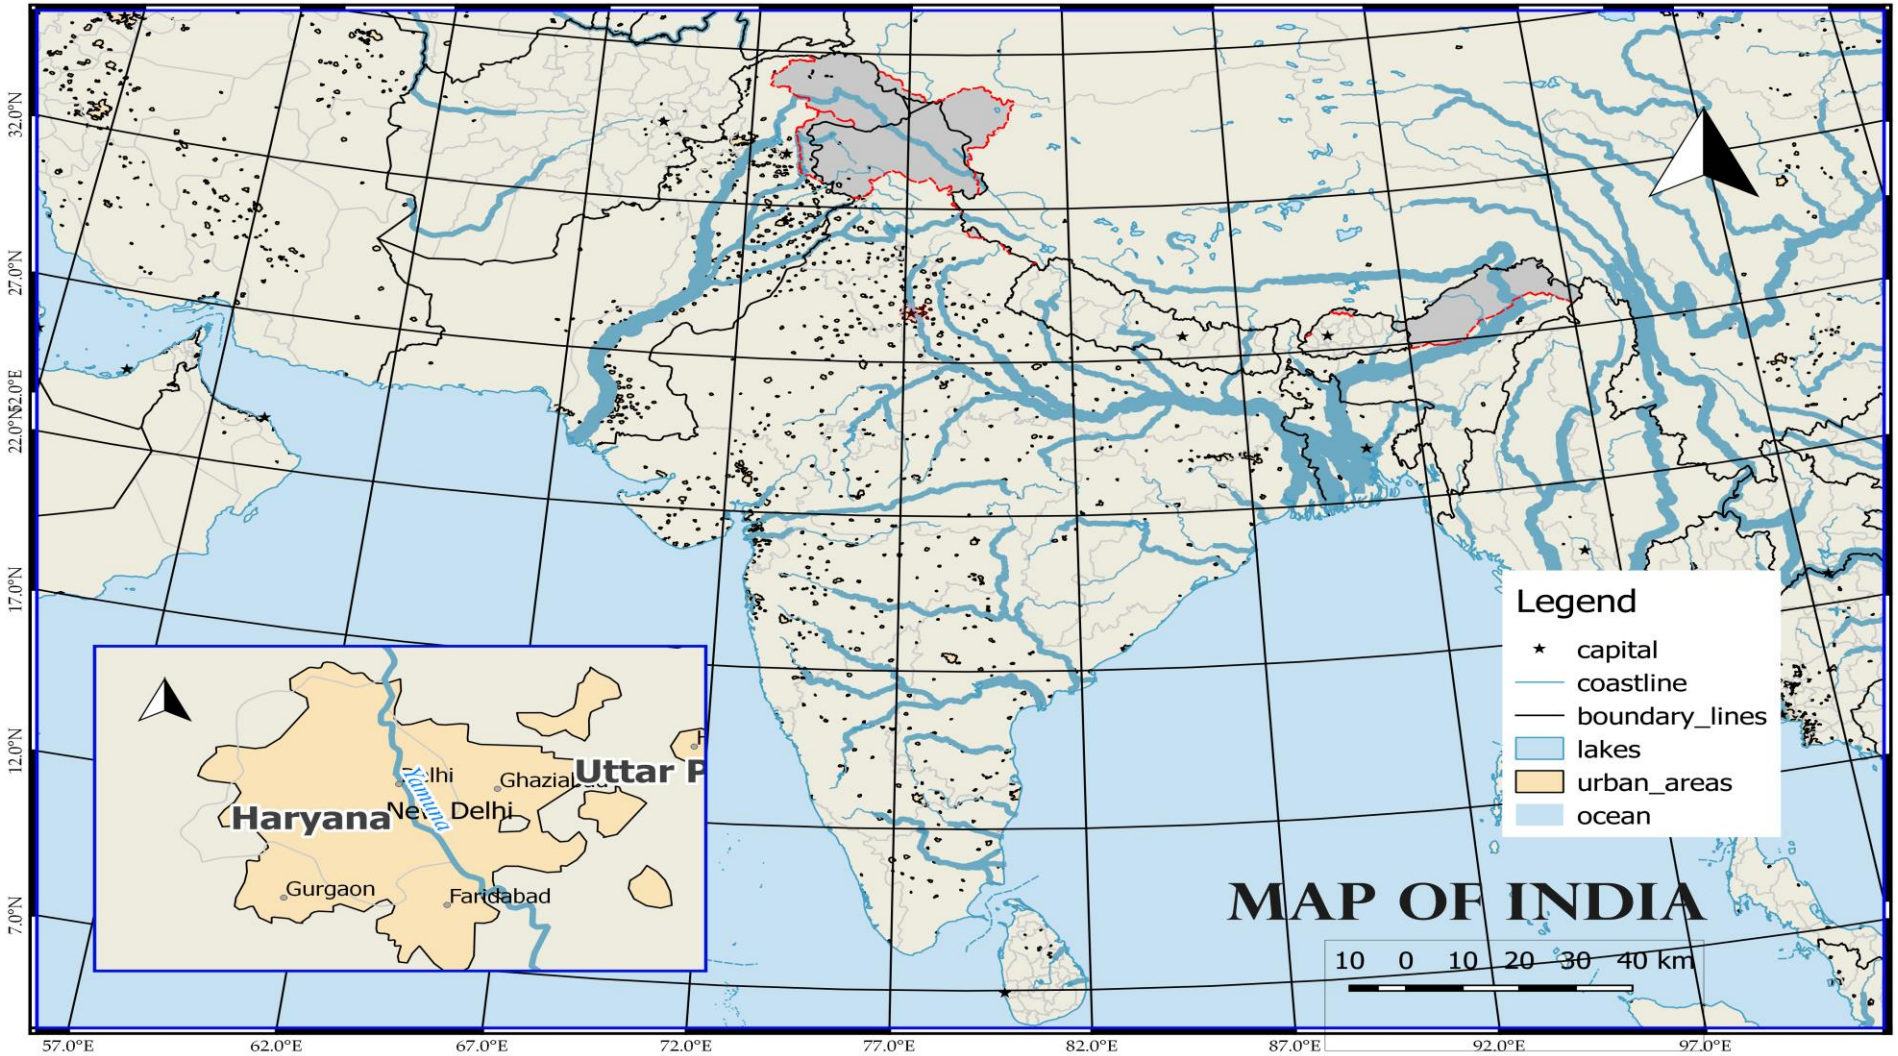

Observation	Recommendation	Snaps
Break in medians found at many places.	Medians openings must be closed as soon as possible to avoid accidents.	
Vehicles parked at shoulders at many places.	Proper parking areas must be provided and parking at shoulder must be banned.	

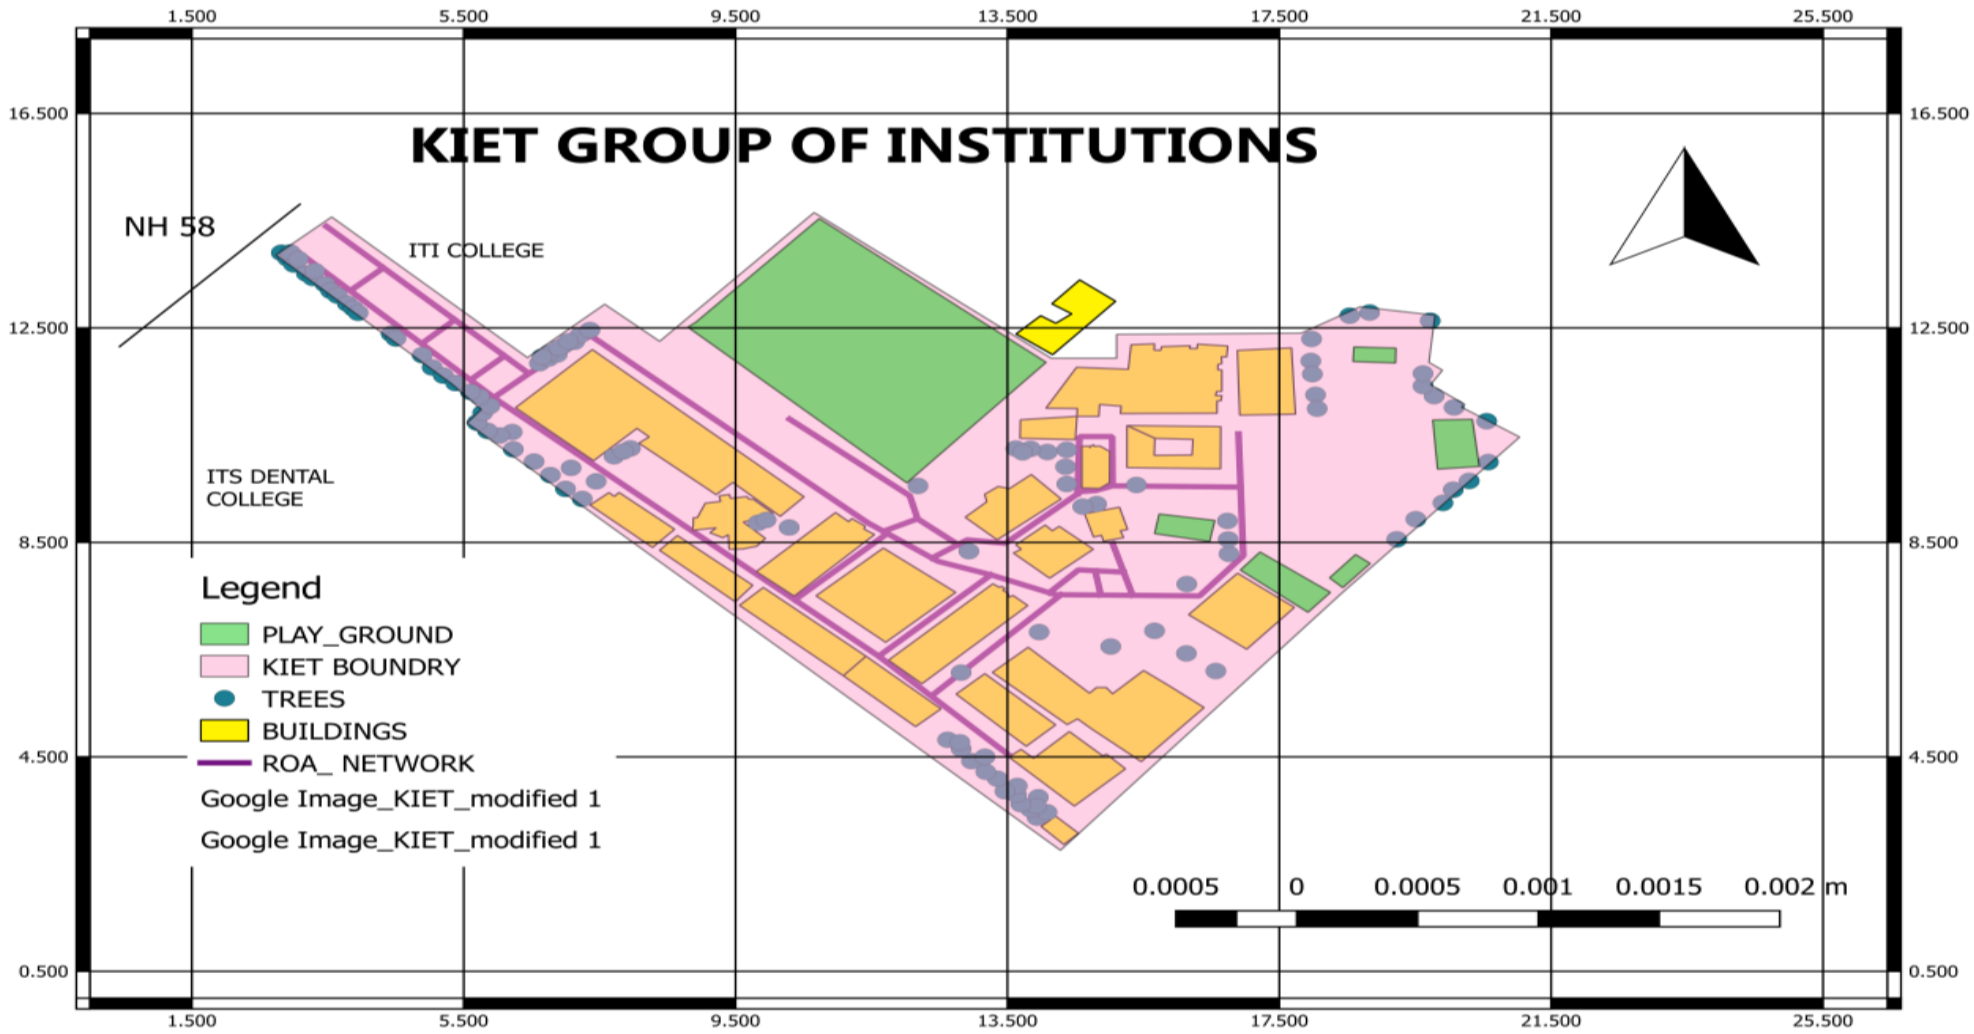

Observation	Recommendation	Snaps
No bus stops and bus lay	Bus stops are very necessary to avoid traffic delays.	
Gas pipelines installed very close to the road.	The pipelines need to be shifted a bit further away.	

Observation	Recommendation	Snaps
The Median Indicators are damaged.	Indicators need to be maintained as soon as possible.	
No speed limit and other warning signs throughout the stretch.	The warning signs must be installed for complete safety of transportation system.

ABSTRACT

India's share of road accident in the world is an area of serious concern. With advancement in technology, new and sophisticated models of vehicle are available and their numbers are increasing day by day. A traffic accident has multi-facet characteristics associated with it. For proper traffic accident analysis use of GIS technology has become an inevitable tool. The city of Dehradun, the capital of Uttaranchal in northern part of India has been selected for study. Five years of police records reveal that nearly 72% of accidents lead to fatal and grievous injuries. Cars, jeeps and vans are mostly responsible for accidents and that the occurrence of accidents is mostly concentrated between 2PM to 10PM. The study reveals that a proper traffic management is required for the city to check the growth of traffic accidents.

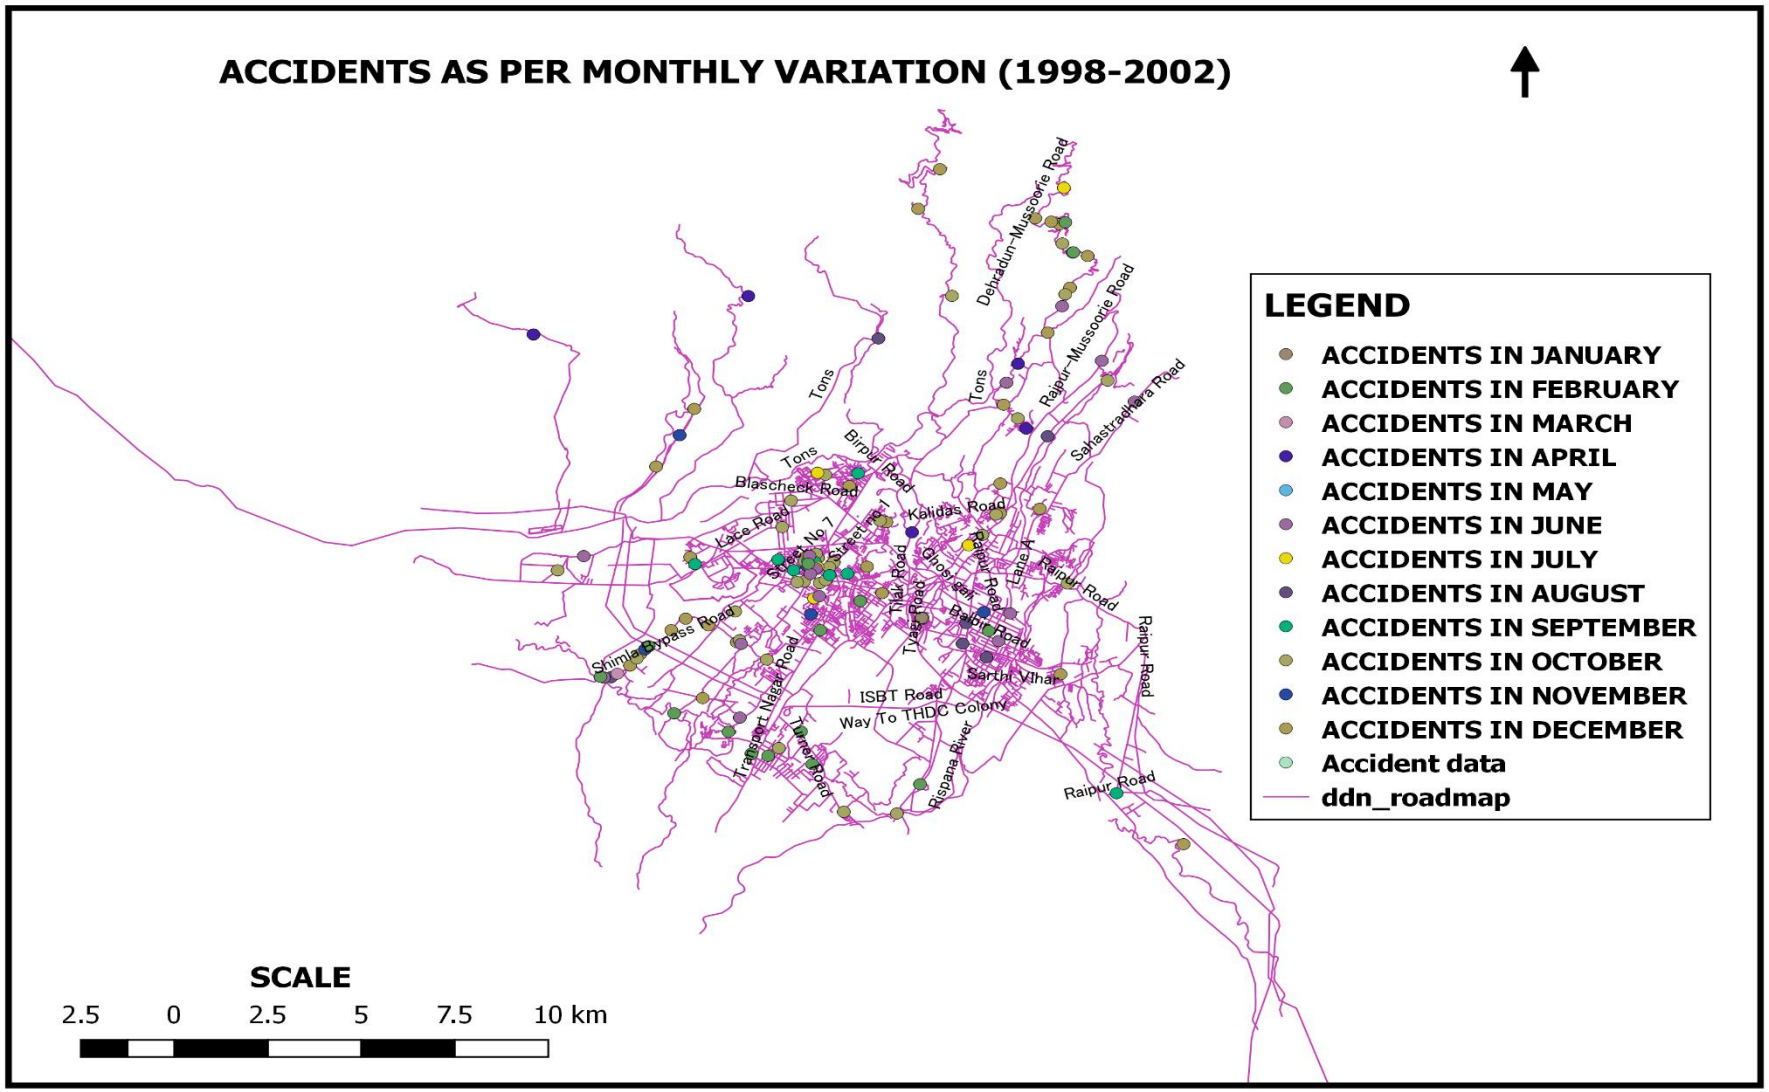

1.0 INTRODUCTION

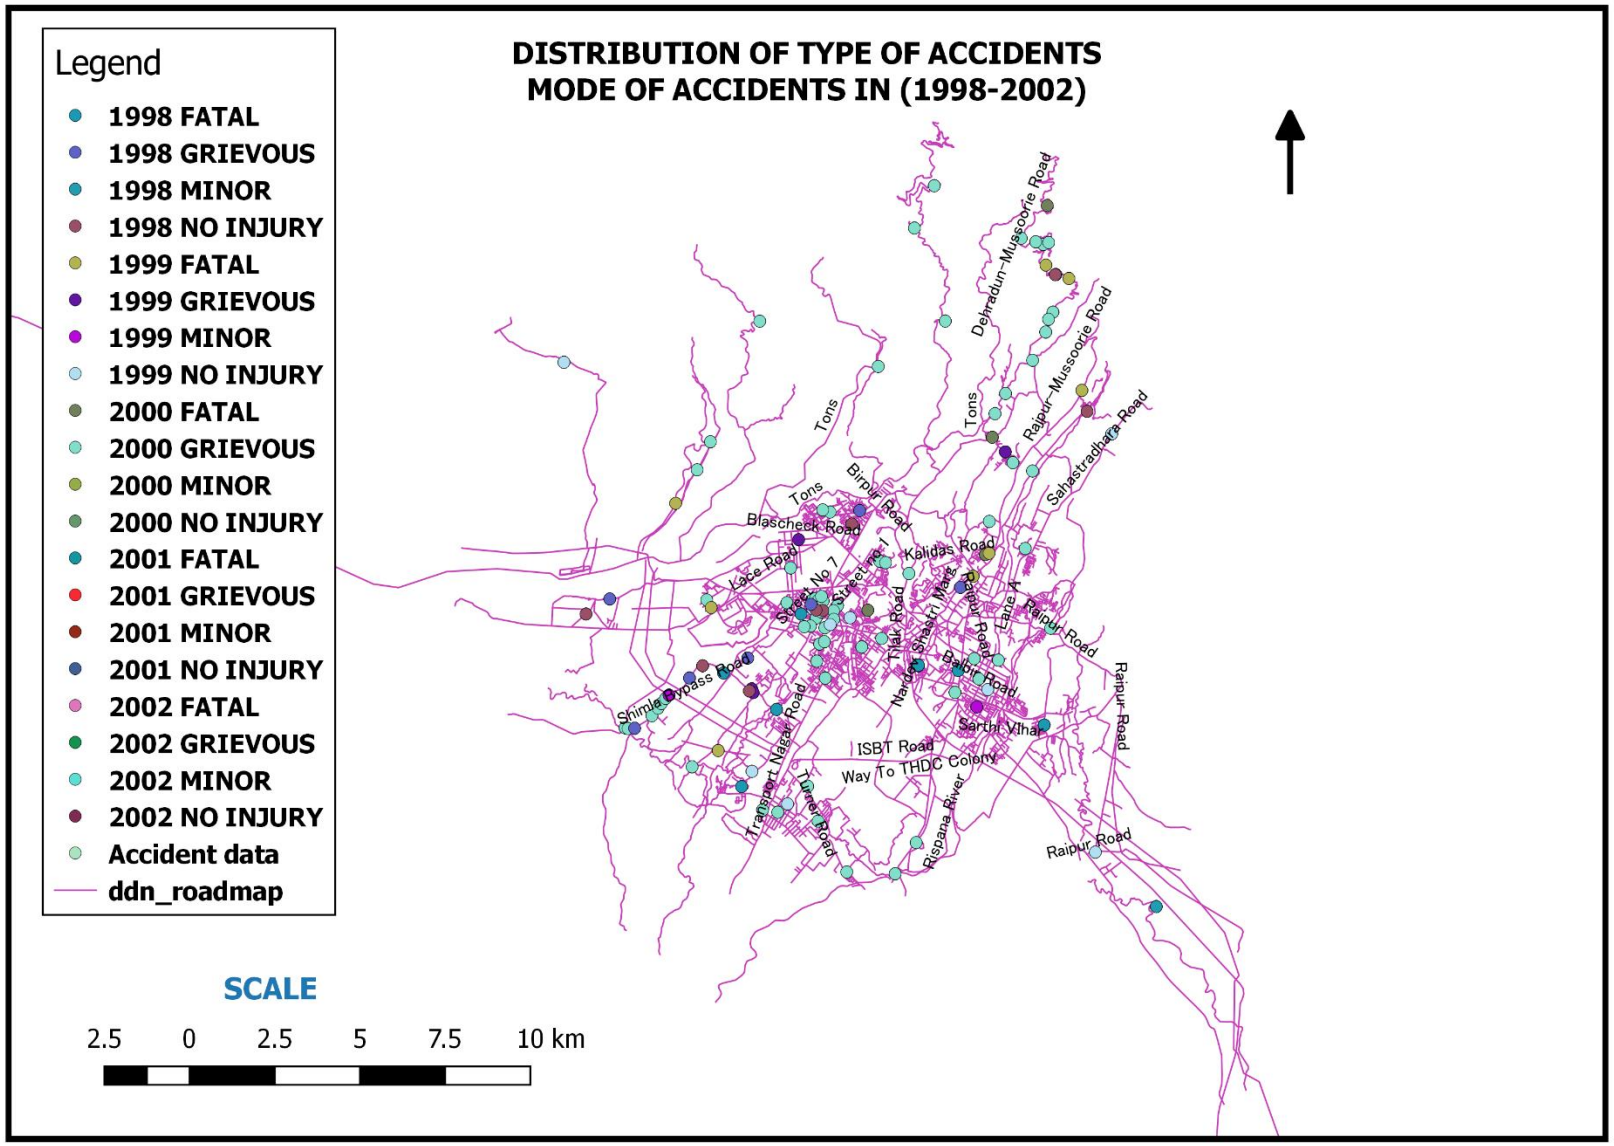

The economic growth of any country depends upon its transportation network, comprising of road, rail and air connectivity. Of these road is the critical one. A good network of road is important as it provides connectivity between rural and urban areas. Alongwith this, road safety is an equally important aspect. It plays a key role towards a sustainable transportation development strategy. The adverse impact of modern road transportation systems is injury and loss of life due to road accidents. While the road accident situation is improving in the high income industrialized countries, most developing countries of accurate and reliable traffic accident data. However, the data required for such an analysis is not always available. Most of the accident information available in police records is incomplete and therefore, may not be utilized to the fullest extent. In addition, records are also needed to provide facts to guide programs including enforcement, education, maintenance, vehicle inspection, emergency medical services, and engineering to improve streets and highways (Sarin, 2000).

Summary Report

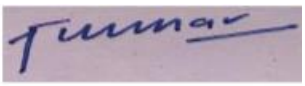

The Department of Electronics &Communication Engineering is organizing a very specialized and highly demanded summer training program. This summer school introduces students to state-of-art Signal & Systems for Signal Acquisition techniques with the concept of virtual instrumentation – the powerful combination of flexible software & modular hardware which helps to integrate theoretical concepts with real-world applications. One can acquire signal from any sensors like Thermocouples, RTDs, Accelerometer, Strain Gauges, etc; analyze signal using NI LABVIEW graphical programming software.

Course Objectives:

- Create awareness among the participants about signal & system using NI-LABVIEW
- To expose the utility, significance and importance of LABVIEW in simulating various signal operations.
- To give exposures of various applications of LABVIEW in different streams of Electronics and Electrical Engineering.
- Exposure to graphical programming environment and techniques for building applications in Fourier Transform, Z transform in LABVIEW.
- Create awareness among the participants about CLAD certification exam and targeting to qualify the CLAD exams of all participants.
- To verify the relevant knowledge, skills and abilities.
- The certification is anchored in three common areas where LabVIEW is used on the job:
    a. Automated test
    b. High-channel-count data acquisition
    c. Measurement and data logging for domain experts
- The CLAD represents a level of mastery of LabVIEW at which a person with minimal oversight can use LabVIEW to do the following:
    a. Acquire and interpret data
    b. Create small VIs
    c. Edit medium-sized VIs
    d. Contribute elements to large VIs and projects

Course Outcomes:

- All the students have successfully completed the training program on "Real time signal and system using NI-Labview software and hardware".

Theme of School

It is known fact that the rapid growth of design and manufacturing industries required some new technologies for fast simulation and control of industrial processes and troubleshooting methodologies. In other words, real-time simulation is a need of a technician to achieve fast and accurate solutions during the operations and the Real-Time Digital Simulator (RTDS) provides an efficient platform. Most of the research and development industries are using this technology to achieve solutions in the real-time frame. Now a day, most of the technical students and researchers have already been using this technology worldwide. Therefore, the department has planned to conduct the motioned school. The summer school on **Real-Time Simulations and Application of OPAL-RT** is a skill development and training program in which experts will teach the designing and controlling concepts (theoretically and their practical approaches) of various electrical systems such as power systems, power electronics, electrical drives, control systems, signal and systems etc. After attending the school, students' will be able to design and develop some research models based on RTDS technology.

Registration Fee

The registration fee for the students (UG, PG and Research Scholars) is **Rs. 750/-**. A maximum number of students participating in the school is limited to 50 students. Acceptance of registration in school is on first come first serve basis. All participants are requested to complete registration before **31st May 2017**. Payment of registration fee for participation in the school by cash payment in **KIET Account Office** or by **paytm** to **+91-8377825935**. Hands on Training-Summer School: Summary Report with Outcome

All students of Second year and Third year Mechanical Engineering Department were offered a summer school (**Hands-on Training Programme)** for 4 weeks that is usually be scheduled just after University exams. This programme is very much beneficial for each student from practical learning point of view as participants perform operations, assemble and dissemble of machines by themselves. This programme was considered as the four weeks summer training and participants were awarded by certificates.

After completion of this training programme students will be able to:

1. Assemble and dissemble different parts of lathe machine to understand working of the components.
2. Perform different machining operation on Lathe Machine, Milling Machine, Drilling Machine, Grinding Machine, Shaping and Slotting Machine.
3. Understand types and specification of Machine Tools
4. Understand Different types of welding
5. Perform different welding operations.
6. Perform different types of testing on specimen.
7. Understand Basic concept of IC Engines.
8. Testing of different types of engines using alternative fuels engines.
9. Maintenance of different parts of engines.
10. Perform assembly of different parts of an IC Engine.
11. Understand technical drawing codes.
12. Draw Orthographic projection and Isometric views and Assembly drawing of mechanical components.

Summary Report

PLC Training is also designed to help delegates keep abreast of the latest PLC technologies and techniques available in this area, this tutorial offers an excellent opportunity for delegates to ask specific questions and exchange ideas relating to their own applications. The Programmable Logic Controller has evolved over the years and this course will provide the information required to make knowledgeable decisions about PLC applications in their individual manufacturing environments and allow for students to make well-informed decisions about existing control applications and to determine what is required for future applications. The **Department of Electronics and Instrumentation** organizes Summer School on Industrial Automation. This PLC training course will also allow students to determine if plant personnel are prepared to meet the new challenges of the ever-changing plant manufacturing environment or if personnel require additional training to meet these challenges.

1. To understand the generic architecture and constituent components of a Programmable Logic Controller.
2. To develop a software program using modern engineering tools and technique for **PLC** and SCADA.
3. To apply knowledge gained about PLCs and SCADA systems to real-life industrial applications. PLC Training is designed to instruct control professionals on how to successfully integrate a PLC into actual day-to-day industrial electrical processes. It not only deals with the hardware and software, but all the surrounding systems that must be compatible to achieve a safe and reliable control system. This training is generic in nature and applies to all types and manufacturers.

COURSE OUTCOME

1. Students will be able to describe typical components of a Programmable Logic Controller.
2. Students will be able to explain the basic concepts of a Programmable Logic Controller.
3. Students will be able to state basic PLC terminology and their meanings.
4. Students will be able to explain and apply the concept of electrical ladder logic, its history, and its relationship to programmed PLC instruction.
5. Students will be able to explain the concept of basic digital electronics and data manipulation.
6. Students will be able to use timer, counter, and other intermediate programming functions.
7. Students will be able to design and program basic PLC circuits for entry-level PLC applications.
8. Students will be able to design and program a small, automated industrial production line.

Department of Electronics & Communication Engineering

Summary Report

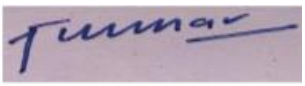

The Department of Electronics &Communication Engineering is organizing a very specialized and highly demanded summer training program. This summer school introduces students to state-of-art Signal & Systems for Signal Acquisition techniques with the concept of virtual instrumentation – the powerful combination of flexible software & modular hardware which helps to integrate theoretical concepts with real-world applications. One can acquire signal from any sensors like Thermocouples, RTDs, Accelerometer, Strain Gauges, etc; analyze signal using NI LABVIEW graphical programming software.

Course Objectives:

- Create awareness among the participants about signal & system using NI-LABVIEW
- To expose the utility, significance and importance of LABVIEW in simulating various signal operations.
- To give exposures of various applications of LABVIEW in different streams of Electronics and Electrical Engineering.
- Exposure to graphical programming environment and techniques for building applications in Fourier Transform, Z transform in LABVIEW.
- Create awareness among the participants about CLAD certification exam and targeting to qualify the CLAD exams of all participants.
- To verify the relevant knowledge, skills and abilities.
- The certification is anchored in three common areas where LabVIEW is used on the job:
    a. Automated test
    b. High-channel-count data acquisition
    c. Measurement and data logging for domain experts
- The CLAD represents a level of mastery of LabVIEW at which a person with minimal oversight can use LabVIEW to do the following:
    a. Acquire and interpret data
    b. Create small VIs
    c. Edit medium-sized VIs
    d. Contribute elements to large VIs and projects

Course Outcomes:

- All the students have successfully completed the training program on "Real time signal and system using NI-Labview software and hardware".

Summary Report

The Department of Electronics & Communication Engineering is organizing a very specialized and highly demanded winter training program. This winter school introduces students to state-of-art Signal & Systems for Signal Acquisition techniques with the concept of virtual instrumentation – the powerful combination of flexible software & modular hardware which helps to integrate theoretical concepts with real-world applications. One can acquire signal from any sensors like Thermocouples, RTDs, Accelerometer, Strain Gauges, etc; analyze signal using NI LABVIEW graphical programming software.

Course Objectives:

- Create awareness among the participants about signal & system using NI-LABVIEW
- To expose the utility, significance and importance of LABVIEW in simulating various signal operations.
- To give exposures of various applications of LABVIEW in different streams of Electronics and Electrical Engineering.
- Exposure to graphical programming environment and techniques for building applications in Fourier Transform, Z transform in LABVIEW.
- Create awareness among the participants about CLAD certification exam and targeting to qualify the CLAD exams of all participants.
- To verify the relevant knowledge, skills and abilities.
- The certification is anchored in three common areas where LabVIEW is used on the job:
    a. Automated test
    b. High-channel-count data acquisition
    c. Measurement and data logging for domain experts
- The CLAD represents a level of mastery of LabVIEW at which a person with minimal oversight can use LabVIEW to do the following:
    a. Acquire and interpret data
    b. Create small VIs
    c. Edit medium-sized VIs
    d. Contribute elements to large VIs and projects

Course Outcomes:

- All the students have successfully completed the training program on "Real time signal and system using NI-Labview software and hardware".

This programme is very much beneficial for each student from practical learning point of view as participants perform operations, assemble and dissemble of machines by themselves. This programme was considered as the four weeks summer training and participants were awarded by certificates.

After completion of this training programme students will be able to:

1. Assemble and dissemble different parts of lathe machine to understand working of the components.
2. Perform different machining operation on Lathe Machine, Milling Machine, Drilling Machine, Grinding Machine, Shaping and Slotting Machine.
3. Understand types and specification of Machine Tools
4. Understand Different types of welding
5. Perform different welding operations.
6. Perform different types of testing on specimen.
7. Understand Basic concept of IC Engines.
8. Testing of different types of engines using alternative fuels engines.
9. Maintenance of different parts of engines.
10. Perform assembly of different parts of an IC Engine.
11. Understand technical drawing codes.

KIET Group of Institutions, Ghaziabad

Summary Report

PLC Training is also designed to help delegates keep abreast of the latest PLC technologies and techniques available in this area, this tutorial offers an excellent opportunity for delegates to ask specific questions and exchange ideas relating to their own applications. The Programmable Logic Controller has evolved over the years and this course will provide the information required to make knowledgeable decisions about PLC applications in their individual manufacturing environments and allow for students to make well-informed decisions about existing control applications and to determine what is required for future applications. The **Department of Electronics and Instrumentation** organizes Summer School on "Process Control using PLCs and DCS". This PLC training course will also allow students to determine if plant personnel are prepared to meet the new challenges of the ever-changing plant manufacturing environment or if personnel require additional training to meet these challenges.

COURSE OBJECTIVE

1. To understand the generic architecture and constituent components of a Programmable Logic Controller.
2. To develop a software program using modern engineering tools and technique for **PLC** and SCADA.
3. To apply knowledge gained about PLCs and SCADA systems to real-life industrial applications. PLC Training is designed to instruct control professionals on how to successfully integrate a PLC into actual day-to-day industrial electrical processes. It not only deals with the hardware and software, but all the surrounding systems that must be compatible to achieve a safe and reliable control system. This training is generic in nature and applies to all types and manufacturers.

COURSE OUTCOME

1. Students will be able to describe typical components of a Programmable Logic Controller.
2. Students will be able to explain the basic concepts of a Programmable Logic Controller.
3. Students will be able to state basic PLC terminology and their meanings.
4. Students will be able to explain and apply the concept of electrical ladder logic, its history, and its relationship to programmed PLC instruction.
5. Students will be able to explain the concept of basic digital electronics and data manipulation.
6. Students will be able to use timer, counter, and other intermediate programming functions.
7. Students will be able to design and program basic PLC circuits for entry-level PLC applications.
8. Students will be able to design and program a small, automated industrial production line.
