Report on Summer School on Revit Software

from 07 June to 11 June 2016

Autodesk Revit Structure software is the **Building Information Modeling (BIM)** solution for structural engineering firms. More effectively streamline the process from design through detailing to fabrication, and connect design and analysis using the integrated multi-material physical model and independently editable analytical model.

This course aims to make the participants productive by giving them the ability to produce drawings and redefine images of buildings. Also, it will help engineers to navigate user interface, architectural objects such as floor, walls, roofs, windows, and stairs covering the basics of Revit Architecture. This course will assist in the creation of schematic design.
